I am a product-minded software engineer with over 6 years experience in C# My main focus is developing quality products, including the whole process from discussing the details with the product team to support in production. I don't do tasking, but solving business problems, the result of which can be planned and measured. I love working with a team, holding Agile meetings, engaging the team in the product and improving processes of development

Work Experience

C# Sr. Software Engineer   Cian   Jan 2020 – Current

Top-1 (15+ mln MAU) real estate search platform in Russia

- Lead a product growth team of 5 people. The team launched 20+ A/B tests every month leading to significant (+37%) increases in sign-ups and activation
- Reduced the support team's moderation efforts by 4 times by automating the process leading to faster customer onboarding
- Developed a subscription payment system that processed thousands payments
- Facilitating team retrospective, planning and grooming meetings
- Interviewed 30+ engineers

C# Software Engineer   golama   Apr 2018 – Jan 2020

Platform for ordering groceries from Moscow stores

- Developed a bot that answered user questions, which reduced the manual work of the support team
- Implemented Apple Pay & Google Pay increased the number of transactions by up to 44% and speed up the checkout process
- Implemented dynamic delivery pricing which expanded delivery options in terms of time and price, that significantly increased revenue

C# Software Engineer   Sberbank-Technology   Apr 2017 – Apr 2018

- Offered and developed the architecture for UI tests that covered more than 80% of manual testing
- Developed custom controls for image cropping
- Developed the integration with cellular providers

C# Software Engineer   Todoist   Jun 2016 – Dec 2016

- Developed custom controls, graphs and navigation flows that allowed us to solve UX problems we had
- Refactoring and optimizing issues with synchronization

C# Software Engineer   Hyperboloid   Feb 2015 – Feb 2016

I developed 2 applications:

1. ShowJet - streaming service with great offline capabilities and tons of non-trivial custom controls
2. Strelka - application for managing Moscow public transport cards

Intern C# Software Engineer   ABBYY   May 2014 – Dec 2014

I developed a Windows Phone application which recognized business cards by capturing an image, saving data to SQLite, sync with cloud and contact list

- Runtime Component for intermediate code between C++ engine and C#
